

SOFTSEAL[®] RESPIRATOR

FINE PARTICLE FILTRATION

UNIQUE PATENTED DESIGN
Seals NOSE, CHIN,
AND CHEEKS with
medical-grade silicone

BETTER FIT for **BETTER PROTECTION**
and **INCREASED COMFORT**

**360 DEGREE SILICONE SEAL
MOLDS TO FACE**

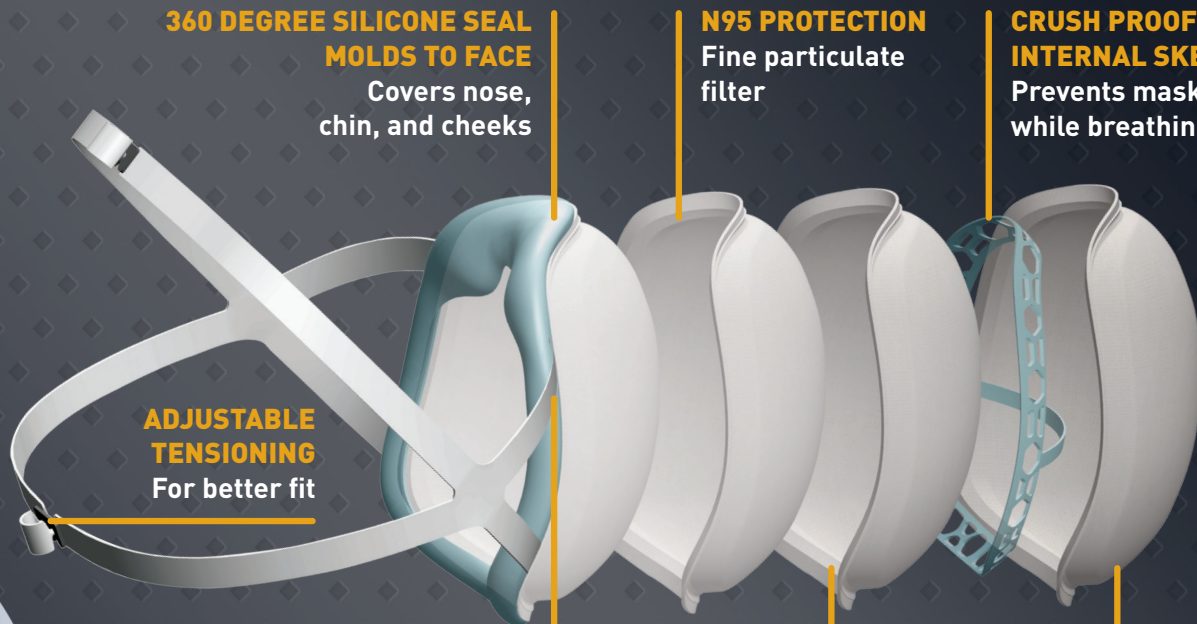

Covers nose,
chin, and cheeks

N95 PROTECTION

Fine particulate
filter

**CRUSH PROOF
INTERNAL SKELETON**

Prevents mask collapse
while breathing

**ADJUSTABLE
TENSIONING**
For better fit

**4-POINT ATTACHMENT
HEAD STRAP**

Ultrasonically welded
without staple holes
that leak

**COARSE
PARTICULATE
FILTER**

**FLAME & FLUID
PENETRATION
RESISTANT**

- Stays sealed while you work, breathe, and speak
- Protection against airborne bacteria, molds, and viruses including H1N1 and Swine Flu
- Protects against allergens, smoke, ash, soot, and fine particle air pollution (P2.5)

The Difference is the Seal

SOFTSEAL[®] RESPIRATOR

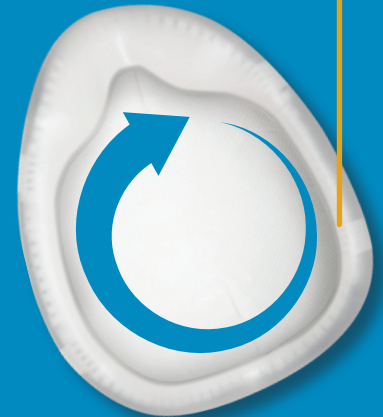

FINE PARTICLE FILTRATION

UNIQUE PATENTED DESIGN
Seals NOSE, CHIN,
AND CHEEKS with
medical-grade silicone

**FLEXIBLE
SILICONE SEAL**
Gives you 360 degrees
of protection

Why N95 masks may fail to protect you

If your N95 mask doesn't seal to your face and remain sealed, the simple fact is you are NOT protected. Anyone who has worn an N95 mask has experienced the substandard performance of many N95s — poor fit, poor seal, and uncomfortable to wear.

Particles in and around your nose after wearing an N95 mask means the seal around the edges of the mask has failed, allowing particles into your breathing zone. The facial seal is the single most important factor in protecting your lungs.

What makes SoftSeal masks better

SoftSeal masks are specifically designed to seal to your face, remain sealed so you stay protected, and be comfortable to wear for extended periods. Here's how:

SILICONE SEAL

- The 360 degree silicone seal molds to your face, maintaining the seal even while speaking or moving.
- As you inhale, the thin, feathered edge of the silicone seal tightens to your face.
- Molded-in adjustable nose clip can be shaped to your nose and won't peel off.

PERSONALIZED FIT FOR A TIGHT SEAL

- Three sizes ensure a personalized fit and tight seal.
- While most masks use staples that can leak, SoftSeal's 4-point, wide head straps are molded into the silicone face seal to help prevent leakage.
- Dual straps above and below the ears provide sealing forces in two directions.
- Tensioning clips in each head strap enable manual adjustment for an even better fit.

COMFORT

- No itchy material against your skin.
- An internal skeleton prevents mask collapse while breathing and improves the mask's durability.
- SoftSeal's no-fog design keeps goggles and glasses fog-free.

**Available in 3 sizes
for a personalized fit:**

- Medium
- Large
- X-Large

*SoftSeal[®] Dust Mask
also available.*

*Same sealing features for
coarse particle filtration.*
