°ClimaCell

TemperPack's ClimaCell insulated cooler is the most environmentally friendly option for shipping pharmaceuticals for up to 48-hours. It's the only insulated box liner made from renewable materials featuring the How2Recycle® "Widely Recyclable" designation for curbside recyclability.

Ships Flat.

When shipping, storing, and disposing, this design will fold flat to minimize space and improve handling. This decreases freight shipping costs and increases warehouse space.

1:1 Performance.

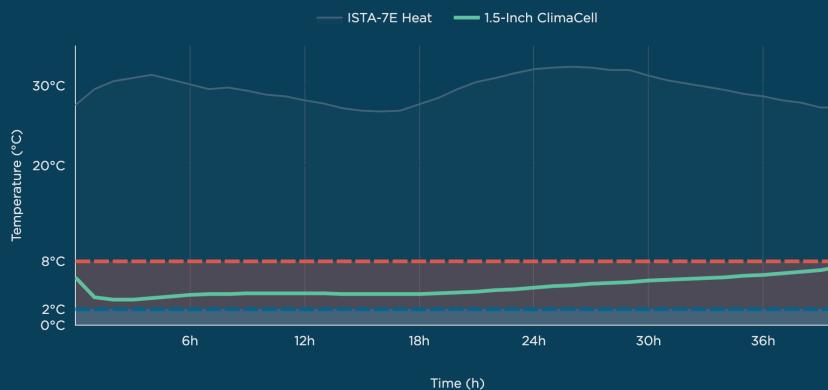

ClimaCell offers a 1:1 R-Value swap compared to traditional petroleum-based coolers, meaning it performs just as well as EPS.

Curbside Recyclable.

Don't let your box liners clog up a landfill. Consumers can recycle ClimaCell in their curbside recycling bin, making them the easiest liner to dispose of responsibly.

ClimaCell is a proprietary insulating material designed to perform as well as other ISTA-7E Heat rated insulators and be fully curbside recyclable.

Testing Conditions: 48-hour ISTA-7E Heat thermal test using 11"x9"x12" box dimensions with 2PC with ClimaCell loaded with (3) 24oz frozen gel packs.

ClimaCell is offered through our partners at Eden Outsourcing.
